

CROP PREDICTION AND SUGGESTIONS REPORT

Kameri - Dilip Patil

Nitrogen: 80

Phosphorous: 43

Potassium: 30

PH: 7

Temprature: 27

Humidity: 80.88

RainFall: 250

WaterLevel: 3

Predictions for above parameters are rice,coffee,jute

Best Practices for maximum production according to parameters .

Best Cultivation Practices: 1. Ensure that the soil is well-drained and has adequate organic matter. 2. Prepare the soil by tilling and adding compost or manure to increase the fertility of the soil. 3. Plant the rice seeds in rows and cover them with a thin layer of soil. 4. Water the rice plants regularly and keep the soil moist. 5. Apply a balanced fertilizer such as 10-10-10 or 8-24-24 to the soil before planting. 6. Control weeds by hand-weeding or using a pre-emergent herbicide. 7. Monitor the plants for signs of pests and diseases and take appropriate action. Fertilizers and Pesticides: Fertilizers: 1. Nitrogen-rich fertilizer such as urea or ammonium nitrate. 2. Phosphorus-rich fertilizer such as triple superphosphate or monoammonium phosphate. 3. Potassium-rich fertilizer such as potassium sulfate or potassium chloride. Pesticides: 1. Insecticides such as pyrethrin or neem oil to control insect pests. 2. Fungicides such as copper sulfate or
